

## CLASSICAL HOMEOPATHY IN CRITICAL ILLNESS

Contrary to popular belief, homeopathy can indeed cure many diseases which are of critical nature and where time is of the essence. The examples provided here are diabetic gangrene, cancer and severely exacerbated psoriasis.

Dr. Mahesh M

Diabetic gangrene is a condition that normally leads to amputation of the part affected. Classical homeopathy can cure this state by not only controlling the blood sugar but also by opening up parallel channels of circulation. Over seventy such cases have been documented at the centre where a limb was saved from amputation.

**Cancer:** In one of the cases a girl was born with an ovarian tumour and underwent surgical removal at age 3, but on account of the age, she was not given chemo by her doctors. Moreover, given the aggressiveness of the cancer, she was not expected to live beyond five years of age.

She has been treated at the centre for 8 years now and she is now eleven years old. All her cancer markers and scans are repeated every year but with no relapse whatsoever. She even erupted in terrible skin problems along the way which were also completely cured with homeopathy.

This shows what homeopathy can do in cancer. They have a patient who is living with a metastatic prostatic cancer for over ten years without any change in his general wellbeing. Another Patient, a woman who was severely hemorrhaging from her cervical cancer, maintaining well for over four years now. The idea is not that homeopathy can cure all cancers but the fact that even those that cannot be cured, will stay well till the end which is difficult with other modes of treatment.

**DIABETIC GANGRENE**  
Before After

**PSORIASIS**  
Before After

**CANCER**  
Before After

**Psoriasis:** Severe psoriasis if infected can lead to life threatening complications. Even at such times, Classical homeopathy can salvage the situation.

## IT'S WOMENCARE THE WAY WOMEN CARE!

Femint Health sets a whole new paradigm in personalized women's health care. The core of their approach is the understanding that women are different and women heal differently. They call this personalized specialty for women. For example, the specialties catering to various health needs of women across all age groups like osteoporosis, PCOD, menopause, adolescent, cervical cancer and pain management with emphasis on women's specific issues like pelvic pain.

The core services also include maternity, gynecology, advanced laparoscopic and minimally invasive gynecological surgeries and a state of the art Centre for Reproductive medicine and IVF.

Their maternity services focus on patient education and awareness of parenthood throughout the antenatal period. At the center, the approach is providing the right impetus on risk free and comfortable natural birthing. The reassurance of experienced medical staff goes a long way in calming

anxious moments of the parents-to-be.

The gynecological surgical services are backed by a team of medical staff and doctors with years of expertise doing complex minimally invasive surgeries. The operating rooms are state of the art with elaborate clean room technology, modular theatres and the latest laparoscopic equipment which suits the performance of procedures that demand the most sterile environment and this has a significant impact on the positive clinical outcomes of surgical patients.

The Centre for Reproductive medicine and IVF at Femint Health has a unique inclusive approach to fertility issues that gives patients complete, innovative, leading edge and yet sensitive care. As the clinical team at Femint trusts "no concern is too small and always believes you come before the science." Femint is your partner to the parenthood dream.

## Safeguarding the Health of Pregnant Women & New-Borns

The health of expecting mother during pregnancy and the health of new-borns are very critical aspects in the field of medicine that has to be given highest possible care. The department of Obstetrics and Gynecology deals with all kinds of antenatal and gynecology problems, fertility control, the menstrual cycle and disorders of the menstrual cycle, normal and abnormal labor, high risk pregnancy, benign diseases of the ovary, Endometriosis and adenomyosis conditions affecting the vulva and vagina.

There are a variety of techniques and methods for pain reduction in childbirth, the epidural being one of them. It is a safe and effective method of pain relief during labor which decreases sensation in the lower part of your body, while you remain fully alert and able to participate in the childbirth experience. It is safe for both mother and baby, causing little or no effect on the baby.

After expert treatment from its experienced and highly-skilled gynecologists, there have been countless patient's lives transformed by the gynecological treatment in the best possible hands. Pranaam Hospital has a 24-hour on demand epidural service for painless deliveries. All personnel involved in the care of patients with an epidural are well trained and competent to do so.

The department of Pediatrics deals with a range of diseases which require

medical or surgical intervention. The state-of-the-art level two neonatal and pediatric intensive care units serve critically ill new-borns and children who require general medical or surgical intervention. Most of the subspecialties of adult medicine like general medicine, general and laparoscopic surgery, orthopedics (including hip, spine surgeries and joint replacement), ENT are available round-the-clock, thus making it a complete neighborhood family hospital. It has been recognized by NABH.

## BEAT CANCER: PREVENT, DETECT EARLY', SAYS WHO

Dr Poonam Khetrapal Singh, Regional Director, World Health Organization, South-East Asia Region speaks about World Cancer Day, 4 February.

Every year cancer kills an estimated 1.1 million people in the WHO's South-East Asia Region and nearly 1.7 million new cancer cases are reported. But cancer can be prevented with lifestyle and dietary changes and cured if detected early and treated adequately.

Preventing and treating cancer is not beyond us. We need stronger policies, robust health promotion programmes and concerted efforts by the government, private sector, communities and even individuals. There is a need for better awareness among people to make healthy life choices to reduce the risk of cancer, among other diseases. Simultaneously the health sector needs to work towards making cancer services - screening and adequate treatment - accessible and affordable. With

focused approach and joint efforts we can prevent precious lives from being lost to cancer.

Nearly 30% cancer deaths can be prevented by addressing the main risk factors - tobacco use, alcohol, unhealthy diet, physical inactivity and excess body weight. Additionally, cancer caused by infections, for example from hepatitis B virus, hepatitis C virus and Human papilloma virus

are also amenable to prevention. Tobacco use - smoking and chewing - is the single most important factor for cancer, causing 22% of the global 8.2 million deaths due to cancer; and 71% of the global lung cancer deaths. The South-East Asia Region is home to 250 million smokers and an equal number of smokeless tobacco users.

Lung and oral cancers are the most common cancers among men in the Region, while cervical and breast cancers are the most common cancers in women. Cancer deaths can be reduced considerably if cases are detected and treated early. Many cancers such as cervical, breast, and oral cancers, have higher cure rates if detected early and treated according to best practices. Regular cancer screening and identifying the early signs and symptoms are key to early detection of cancer.

Globally cancer cases are expected to rise by 70% over the next two decades if we do not act now.

## EMERGENCY AND TRAUMA CARE BY SPECIALISTS, 24\*7 ON CALLS

These days, if there is an accident, it is a tough call. While the trauma requires immediate attention from experts at the same time there is also the big issue of which hospital will make the least hassle in. This is even more in the night.

Zoi Hospitals, founded by Dr Ramesh Chandra Katragadda, aims to hit the spot for Emergency and Trauma care. It has a team of nine Orthopaedicians, five intensivists and three Internists with five duty doc-

24/7 EMERGENCY  
Advanced Orthopaedics  
Special Surgeries

tors, who provide around the clock emergency services. With world class ER, with one minor OT and four full-fledged OTs, critical care, diagnostic services available, Zoi is always ready for handling trauma and emergency cases. They are equipped for managing all kinds of poly-

trauma with surgical gastroenterologists, neurosurgeons, urologist, cardiologist available.

Zoi Hospitals USP is that they have practicing senior orthopaedicians and intensivist team available 24x7, even in middle of night at the hospital.

**IMMEDIATE EXPERT INTERVENTION BY SPECIALISTS.**

In the centre of the city, Zoi provides comfortable, clean, cost effective yet

world class emergency care in the hands of highly experienced specialists.

All this with a smile. The warmth and competent care from the supporting paramedical and non-medical staff makes good Zoi's tagline, where YOU matter.
